

Source Code Checklist

Spencer Smith

November 11, 2025

- Identifier naming
 - Identifier names are consistent
 - Identifier names are meaningful
- Coding
 - Source code in the src folder
 - Comments on “what” not “how”
 - Avoid hard-coded constants (other than maybe 0 or 1)
 - Consistent indentation
 - Explicit identification of coding standard being followed
 - Code standard is followed
 - Parameters in the same order for all functions
- Relation to other documents
 - Descriptive name for source code files
 - Mapping to module guide (system architecture) is clear, may require a document explicitly mapping between modules and code files
 - Show mapping between MIS symbols (low-level design document) and code symbols
- Readability

- Code is reasonably understandable to someone that knows the programming language, but is new to the project
 - Esoteric language features avoided when a simpler language feature could be used
 - Incomplete code is flagged with a suitable marker, such as “TO DO”?
-
