Final Documentation Checklist

Spencer Smith

September 23, 2025

The following checklist is relevant when finishing a project in the SE capstone course.

• Clean-up repo
\square Repo name is meaningful (not generic name with capstone in it)
$\hfill\Box$ Issues are closed (with appropriate explanation and/or changes to the repo contents)
\square Folders for extras that are not used are deleted
\square Meaningful README file on GitHub landing page
\square LICENSE is filled in
\square SRS templates that were not used are deleted
• Changes are clear to TAs
\Box TA can see traceability between issue and change, or issue and explanation
• Project is easy to navigate
\Box Clear traceability between high-level and low-level design and to code
\Box Clear traceability between test cases and requirements
\Box Clear traceability between test cases and modules/classes
